

The MP-150 Panel is ideal for complicated roofs planes involving many hips and valley's, and the taller seam height provides a bolder appearance. The seam design allows panels to be installed in two directions from a center panel. This allows for roof symmetry and easier installation with less waste. The panel is ideal for roofs with slope transitions.

Panel Clip

**MP-150 Standard Clip
(MP150SC)**

- Architectural (solid substrate) applications.
- Separate snap-on seam allows panels to be installed in two directions.
- Applications on 3:12 slopes and greater.
- Continuous panel lengths. Field forming available.
- Easy panel to install on complicated and multiple roof planes.
- Ideal for roof slope transitions.
- Surface patterns include smooth, striated, pencil ribs, and bead ribs.

MATERIAL	STANDARD WIDTH	OPTIONAL WIDTH
